

INVESTMENT STYLE

The Amana Participation Fund is the first non-equity, *halal* income fund offered in the US. It seeks to earn **current income** and **preserve capital** with a portfolio of securities designed to be less volatile than equities.

- Invests in **short-term** and **intermediate-term** Islamic income-producing investment certificates (*sukuk, murabaha, wakala*)
- **Global** scope, with a minimum of 50% US dollar denominated securities and no more than 10% in any other currency
- Investments are made in accordance with **Islamic principles**

The name, Participation, describes the characteristics of *sukuk* – investment certificates structured so that investors share in their economic profits and losses. *Sukuk* have characteristics similar to conventional bonds, such as a maturity and a coupon; however, unlike conventional bonds, they typically reflect an undivided beneficial ownership interest in an underlying asset, similar to an equity.

GROWTH OF \$10,000¹

met. Securities of the Fund are offered and sold only through the prospectus or summary prospectus.

A Fund's 30-Day Yield, sometimes referred to as "standardized yield" or "SEC yield," is calculated by dividing the net investment income per share during the preceding 30 days by the net asset value per share on the last day of the period. The 30-Day Yield provides an estimate of a Fund's investment income rate but may not equal the actual income distribution rate. Saturna Capital, the Amana Participation Fund's investment adviser, does not subsidize the Fund's expenses.

Credit ratings are the lesser of S&P Global Ratings or Moody's Investors Service. If neither S&P nor Moody's rate a particular security, that security is categorized as not rated (except for US Treasury securities and securities issued or backed by US agencies which inherit the credit rating for the US government). Ratings range from AAA (highest) to D (lowest). Bonds rated BBB or above are considered investment grade. Credit ratings BB and below are lower-rated securities (junk bonds). Ratings apply to the creditworthiness of the issuers of the underlying securities and not the fund or its shares. Ratings may be subject to change.

Please consider an investment's objectives, risks, charges, and expenses carefully before investing. For this and other important information about the Amana Participation Fund, please obtain and carefully read a free prospectus or summary prospectus from your financial adviser, at www.amanafunds.com, or by calling toll-free 1-800-728-8762.

NOT FDIC INSURED | NOT BANK GUARANTEED | MAY LOSE VALUE

WHAT MAKES SUKUK HALAL?

	Sukuk	Conventional Bonds
Underlying Asset	Proof of ownership in an asset	Debt obligation
Legal Structure	Holders each hold an undivided beneficial ownership in underlying assets	Issuer has a contractual obligation to pay bond holders interest and principal on certain specified dates
Halal considerations	The underlying assets are <i>halal</i>	n/a
Pricing	Pricing based on value of underlying assets	Pricing based on credit rating of issue and issuer
Valuation	Buyers purchase assets that have value	Buyers act as creditors in implicit loan agreement
Investment rewards and risks	Holders receive a share of profits from the underlying assets (and accept a share of any loss incurred)	Holders receive regularly scheduled interest payments for the life of the bond, and the principal is returned at the bond's maturity date

Risks: The Participation Fund limits the securities it purchases to those consistent with Islamic principles. This limits opportunities and may affect performance. Fund share prices, yields, and total returns will change with market fluctuations as well as the fortunes of the countries, industries, and companies in which it invests. Foreign investing involves risks not normally associated with investing solely in US securities. These include fluctuations in currency exchange rates, less public information about securities, less governmental market supervision and the lack of uniform financial, social, and political standards. Foreign investing heightens the risk of confiscatory taxation, seizure or nationalization of assets, establishment of currency controls, or adverse political or social developments that affect investments. The risks of foreign investing are generally magnified in the smaller and more volatile securities markets of the Participation Fund. Sukuk are specifically structured to adhere to Islamic investment principles, but also must be engineered to be economically feasible in order to attract investment. Sukuk structures may be significantly more complicated than conventional bonds and often include a series of entities created specifically to support the sukuk structure. In addition, sukuk are largely created in or otherwise subject to the risks of developing economies, many of which have weak or inconsistent accounting, legal, and financial infrastructure.

The Fund is non-diversified and may invest a larger percentage of its assets in fewer issuers, which may cause the Fund to experience more volatility than diversified funds.

Effective duration and modified duration are measures of a fund's sensitivity to changes in interest rates and the markets. A fund's modified duration is a dollar-weighted average length of time until principal and interest payments must be paid. Longer maturities typically indicate greater sensitivity to interest rate changes than shorter maturities. Effective duration differs from modified duration in that it accounts for the optionality embedded in call options and other security specific covenants that can change expected cash flows as the result of the movement of interest rates. Longer durations tend to indicate greater sensitivity to interest rate changes than shorter durations.

The FTSE Sukuk Index measures the performance of global Islamic fixed income securities, also known as sukuk. Investors cannot invest directly in the Index.

Morningstar Ratings™ ("Star Ratings") are as of June 30, 2020. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance (not including the effects of sales charges, loads, and redemption fees), placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. In addition to the Overall Morningstar Rating™, the Investor Shares were rated 4 Stars and the Institutional Shares were rated 5 Stars for the 3-year period, among 233 Emerging Markets Bond Funds, respectively. © 2020 Morningstar, Inc.
