A Fund's 30-Day Yield, sometimes referred to as "standardized yield" or "SEC yield," is calculated by dividing the net investment income per share during the preceding 30 days by the net asset value per share on the last day of the period. The 30-Day Yield provides an estimate of a Fund's investment

income rate but may not equal the actual income distribution rate. Saturna Capital, the Amana Income Fund's investment adviser, does not subsidize the Fund's expenses.

Risks: The Amana Income Fund limits the securities it purchases to those consistent with Islamic and sustainable principles. This limits opportunities and may affect performance. Fund share prices, yields, and total returns will change with market fluctuations as well as the fortunes of the countries, industries, and companies in which it invests. Foreign investing involves risks not normally associated with investing solely in US securities. These include fluctuations in currency exchange rates, less public information about securities, less governmental market supervision, and the lack of uniform financial, social, and political standards. Foreign investing heightens the risk of confiscatory taxation, seizure or nationalization of assets, establishment of currency controls, or adverse political or social developments that affect investments.

The S&P 500 is an index comprised of 500 widely held common stocks considered to be representative of the US stock market in general. Investors cannot invest directly in the Index.

Distributor: Saturna Brokerage Services, a wholly-owned subsidiary of Saturna Capital and member FINRA / SIPC.

The Morningstar Style Box™ reveals a fund's investment strategy. For equity funds, the vertical axis shows the market capitalization of the stocks owned and the horizontal axis shows investment style (value, blend, or growth).

Morningstar Ratings™ ("Star Ratings") are as of September 30, 2021. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered

a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance (not including the effects of sales charges, loads, and redemption fees), placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. In addition to the Overall Morningstar Rating™, the Investor Shares were rated 2 Stars for the 3-year period, 2 Stars for the 5-year period, and 1 Star for the 10-year period, among 1,257, 1,102, and 812 Large Blend Funds, respectively.
